

## Dover Western Docks Revival

### Client

Dover Harbour Board

### Value

£250,000,000

### Services

Quantity Surveying & Cost Management

### Sectors

Civil Engineering and Infrastructure

A significant investment of £250 million in The Port of Dover to rejuvenate the historic Western Docks.

Since November 2014 we have been assisting Dover Harbour Board to progress the redevelopment of the Western Docks. The project aims to transform the harbour waterfront providing a catalyst to develop both leisure and commercial opportunities.

As well as constructing a new pier and marina the project will also provide two new berths for both cruise and cargo vessels and an 11,000 sqm refrigerated cargo terminal and distribution centre.

Woodley Coles have provided pre-contract expertise in cost planning, risk management, preparation of bills of quantities / tender pricing documents and have assisted the evaluation of the financial aspects of received tenders.

The award of the £115 million Marine Structures and Bridge Contract to the Joint Venture, Volker Stevin Boskalis Westminster (VSBW), in December 2016, extended our continuing scheme cost planning and risk management role to provide construction cost audit services in relation to the monthly applications for payment submitted by VSBW.
